ABOUT

TripFoxCapital is a fully automated trading platform that gives you full control of your investments, and allows you to withdraw your capital and profit anytime. We were one of the first to invest in cryptocurrencies.

TripFoxCapital is a legal leading blockchain investment company.

Our Mission:

Our mission is to act as a catalyst for universal adoption and blockchain innovation. We focus only on investing in blockchain technologies. Our team has experience in both traditional financing and emerging blockchain technology. In our bid to make the most of your money, you can choose between our services spanning from trading in the stock market to investing in natural resources such as oil and gas along side getting crisp opportunities in Real Estate as a whole.

OUR SERVICES

- **CYPTOCURRENCY**
- **REAL ESTATE**
- **FOREX STOCK (CFD)**
- **OTHERS**

CRYPTOCURRENCY

WHAT ARE CRYPTOCURRENCIES?

A Cryptocurrency is a digital coin, designed to be transferred between individuals in virtual transactions. Cryptocurrencies exist only as virtual data and not as physical objects.

Decentralized cryptocurrency is produced by the entire cryptocurrency system collectively at a rate which is defined when the system is created and which is publicly known. In centralized banking and economic systems such as the Federal Reserve System (FRS), corporate boards or governments control the supply by printing units of fiat money or demanding additions to digital banking ledgers.

“Owning a Bitcoin means you have the collective agreement of each and every computer on the Bitcoin network that it is currently owned by you and – more importantly – that it was legitimately created by a miner.”

A cryptocurrency, crypto currency or crypto is a digital asset designed to work as a medium of exchange wherein individual coin ownership records are stored in a ledger existing in a form of computerized database using strong cryptography to secure transaction records, to control the creation of additional coins, and to verify the transfer of coin ownership. It typically does not exist in physical form (like paper money) and is typically not issued by a central authority.

Cryptocurrencies typically use decentralized control as opposed to centralized digital currency and central banking systems. When a cryptocurrency is minted or created prior to issuance or issued by a single issuer, it is generally considered centralized. When implemented with decentralized control, each cryptocurrency works through distributed ledger technology, typically a blockchain, that serves as a public financial transaction database.

REAL ESTATE

Real estate trading is the wild side of real estate investment. Like day traders, who are distinct from buy-and-hold investors, real estate traders are an entirely different breed from buy-and-rent landlords. Real estate traders buy properties with the intention of holding them for a short period of time, often no more than three to four months, after which they hope to sell them for a profit. This technique is also called flipping properties and is based on buying properties that are either significantly undervalued or in a very hot market.

As property flippers we often forgo putting any money into a house for improvements; the investment has to have the intrinsic value to turn a profit without alteration or we won't consider it. Flipping in this manner is a short-term cash investment. To take advantage of potentially large returns, we have to have cash on hand, as traditional financing doesn't generally work for this type of transaction.

A second class of property flipper also exists. These investors make their money by buying reasonably priced properties and adding value by renovating them. This can be a longer-term investment depending on the extent of the improvements. The limiting feature of this investment is that it is time intensive and often only allows investors to take on one or two properties at a time hence we try to avoid properties with high maintenance cost and focus more on properties with high undervalue.

“Real estate trading has a shorter time period during which capital and effort are tied up in a property. Depending on market conditions, there can be significant returns even on this shorter time frame.”

Despite the magnitude and complexity of the real estate market, many people tend to think the industry consists merely of brokers and salespeople. However, millions of people in fact earn a living through real estate, not only in sales but also in appraisals, property management, financing, construction, development, counseling, education, and several other fields. Many professionals and businesses—including accountants, architects, banks, title insurance companies, surveyors, and lawyers—also depend on the real estate industry.

FOREX STOCK (CFD)

WHAT IS STOCK MARKET?

As the name suggests, the stock market is a marketplace for the trading of stocks or shares. There are many stock markets around the world, and the UK's main exchange is The London Stock Exchange (LSE).

To form a market index, company shares are grouped together, and their value is combined as a weighted average (the bigger the company the larger its effect on the value of the index) resulting in a figure. Generally, companies of similar size and value are grouped together. Often you hear the market being up or down. This relates to stock market indices rising and falling.

“If a company you hold shares in pays dividends, you'll receive dividend payments. If a company is successful and manages to grow profits over time, the amount it pays out as a dividend can increase.”

A cryptocurrency, crypto currency or crypto is a digital asset designed to work as a medium of exchange wherein individual coin ownership records are stored in a ledger existing in a form of computerized database using strong cryptography to secure transaction records, to control the creation of additional coins, and to verify the transfer of coin ownership. It typically does not exist in physical form (like paper money) and is typically not issued by a central authority. Cryptocurrencies typically use decentralized control as opposed to centralized digital currency and central banking systems. When a cryptocurrency is minted or created prior to issuance or issued by a single issuer, it is generally considered centralized. When implemented with decentralized control, each cryptocurrency works through distributed ledger technology, typically a blockchain, that serves as a public financial transaction database.

WHY YOU SHOULD CHOOSE US!!!

See the benefits you can get by working with our experts

Pro Team

With a world class team, we guarantee the best pips and strategy and ensure all our innovations are veteran controlled.

Minimal Risk

With the expertise and experience of our risk management team as well as our automated softwares, we guarantee the minimal risk ever.

No Limits!

Our packages happen to be for all Wallet Sizes. Also, all our Clients happen to have \$ 5 bitcoin equivalence Bonus on Referrals.

Legal Company

TripFoxCapital Limited is a top class registered Platform, providing its investment services to the members all around the world.

Security

All data on financial operations as well as personal data are effectively protected with EV SSL certificates and additional services on encryption of data transfer.

Privacy

We don't require identity verification. Information about your activity on the website is private and can't be accessed by third parties.
